Microbiome Information for: ME/CFS without IBS

For non-prescribing Medical professionals Review

The suggestions below are based on an Expert System (Artificial Intelligence) modelled after the MYCIN Expert System produced at Stanford University School of Medicine in 1972. The system uses over 1,800,000 facts with backward chaining to sources of information. The typical sources are studies published on the US National Library of Medicine.

Many recent studies has found that symptoms and symptom severity has strong associations to the microbiome for many conditions. Correcting the microbiome dysfunction is beleived to reduce the severity of symptoms. In some cases, this correction may cause symptoms to disappear.

These are a priori suggestions that are predicted to independently reduce microbiome dysfunction. Suggestions should only be done after a review by a medical professional factoring in patient's conditions, allergies and other issues.

This report may be freely shared by a patient to their medical professionals

Best practise for making microbiome adjustments is to obtain the individuals microbiome. The following are the best microbiome to use with this expert system model. The suggestions below are intended as temporary suggestions until a test result in received.

Bacteria being reported because of atypical values.

These bacteria were reported atypical in studies of ME/CFS without IBS

Nota Bena: Many studies are done with a small sample size or mixtures of condition subsets which can greatly diminish the ability to detect bacteria shifts.

Bacteria Name	Rank Shift	Taxonomy ID
Clostridiaceae	family High	31979
Pseudomonadaceae	family High	135621

Substance to Consider Adding or Taking

These are the most significant substances that are likely to improve the microbiome dysfunction. Dosages are based on the dosages used in clinical studies. For more information see: https://microbiomeprescription.com/library/dosages. These are provided as examples only

Colors indicates the type of substance: i.e. probiotics and prebiotics, herbs and spices, etc. There is no further meaning to them.

amaranth bacillus coagulans (probiotics) 10 BCFU/day barley 60 gram/day bifidobacterium pseudocatenulatum liO9,bifidobacterium catenulatum li10 (probiotics) dairy fluorine iron 400 mg/day Lithium polydextrose rhubarb Slippery Elm & glucan 500 mg/day sucralose 340 mg/day Tributyrin vegetarians walnuts 75 gram/day

Retail Probiotics

Over 260 retail probiotics were evaluted with the following deem beneficial with no known adverse risks.

Substance to Consider Reducing or Eliminating

These are the most significant substances have been identified as probably contributing to the microbiome dysfunction.

In some cases blood work may show low levels of some vitamins, etc. listed below. This may be due to greedy bacteria reported at a high level above. Viewing bacteria data on the Kyoto Encyclopedia of Genes and Genomes (https://www.kegg.jp/) may provide better insight on the course of action to take.

apple Curcumin fructo-oligosaccharides (prebiotic) galacto-oligosaccharides (prebiotic) Human milk oligosaccharides (prebiotic, Holigos, Stachyose) inulin (prebiotic) lactobacillus casei (probiotics) lactobacillus paracasei (probiotics) lactobacillus plantarum (probiotics) resistant starch rosmarinus officinalis,rosemary soy thyme (thymol, thyme oil) wheat bran
