Microbiome Information for: Bipolar Disorder

For non-prescribing Medical professionals Review

The suggestions below are based on an Expert System (Artificial Intelligence) modelled after the MYCIN Expert System produced at Stanford University School of Medicine in 1972. The system uses over 1,800,000 facts with backward chaining to sources of information. The typical sources are studies published on the US National Library of Medicine.

Many recent studies has found that symptoms and symptom severity has strong associations to the microbiome for many conditions. Correcting the microbiome dysfunction is beleived to reduce the severity of symptoms. In some cases, this correction may cause symptoms to disappear.

These are a *priori suggestions* that are predicted to independently reduce microbiome dysfunction. Suggestions should *only be done after a review* by a medical professional factoring in patient's conditions, allergies and other issues.

This report may be freely shared by a patient to their medical professionals

---

Best practise for making microbiome adjustments is to obtain the individuals microbiome. The following are the best microbiome to use with this expert system model. The suggestions below are intended as temporary suggestions until a test result in received.

Bacteria being reported because of atypical values.

These bacteria were reported atypical in studies of Bipolar Disorder

Nota Bena: **Many studies are done with a small sample size or mixtures of condition subsets which can greatly diminish the ability to detect bacteria shifts.**

Substance to Consider Adding or Taking

These are the most significant substances that are likely to improve the microbiome dysfunction. Dosages are based on the dosages used in clinical studies. For more information see: https://microbiomeprescription.com/library/dosages. These are provided as examples only

Colors indicates the type of substance: i.e. probiotics and prebiotics, herbs and spices, etc. There is no further meaning to them.

apple
arabinogalactan (prebiotic) 21 gram/day
banana
berberine 1.5 gram/day
Bile Acid Sequestrant
Bofutsushosan
fat
Human milk oligosaccharides (prebiotic, Holigos, Stachyose) 2 gram/day
non-starch polysaccharides
partially hydrolyzed guar gum 6 gram/day
pectin
Pumpkin
quercetin 2 gram/day
stevia 800 mg/day
triphala 9000 mg/day
vegetarians
Xanthohumol
xylan (prebiotic)

Substance to Consider Reducing or Eliminating

These are the most signigicant substances have been identified as probably contributing to the microbiome dysfunction.

In some cases blood work may show low levels of some vitamins, etc. listed below. This may be due to *greedy* bacteria reported at a high level above. Viewing bacteria data on the Kyoto Encyclopedia of Genes and Genomes (https://www.kegg.jp/) may provide better insight on the course of action to take.

bacillus subtilis (probiotics)
bifidobacterium animalis lactis (probiotics)
Bismuth Salts
brown rice
buckwheat
clostridium butyricum (probiotics),Miya,Miyarisan
galla chinensis (herb)
garlic (allium sativum)
lactobacillus casei (probiotics)
lactobacillus kefiri (NOT KEFIR)
lactobacillus paracasei (probiotics)
lactobacillus reuteri (probiotics)
lactobacillus rhamnosus gg (probiotics)
partial sleep deprivation
pediococcus acidilactic (probiotic)
quercetin,resveratrol
saccharomyces boulardii (probiotics)
Shen Ling Bai Zhu San
sucralose
tannic acid
walnuts
wheat
whole-grain barley

Sample of Literature Used
